

This assignment (VangtiChai) was developed with substantial assistance from Claude (Anthropic), an AI assistant, used as follows:

- **Specification interpretation:** I provided the assignment PDF to Claude, which read the requirements and the four reference screenshots (Pixel XL portrait/landscape, Nexus 10 portrait/landscape) to determine the layout structure.
- **Code generation:** Claude generated the full Android Studio project structure, including:
 - MainActivity.kt — all app logic (digit entry from the right, greedy change-calculation algorithm over note denominations, state save/restore via onSaveInstanceState)
 - Four activity_main.xml layout variants (layout/, layout-land/, layout-sw600dp/, layout-sw600dp-land/) built with ConstraintLayout and GridLayout
 - sizes.xml (phone) and values-sw600dp/sizes.xml (tablet) dimension resources, styles.xml, strings.xml, colors.xml, themes.xml
 - Gradle build configuration
- **Iteration:** After running the app, I reported a layout bug (UI confined to the top portion of the screen) and Claude diagnosed and fixed the ConstraintLayout constraints across all four layout variants.
